INTERNATIONAL CONFERENCE

Malaysia (online)
5–8 December

15th International Conference on Concrete Engineering and Technology: Innovation and Resilience in Concrete Construction

Web: <https://concret2022.com>

Project: 2 Ruskin Square, East Croydon

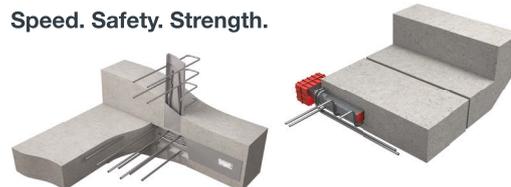

Providing hidden support for precast stairs with integral half landings, TSS connectors (circled) enhanced the visual impact of fair-faced concrete inside both stair cores. Bespoke FERBOX was used to connect the external floor slabs, and the main (covered) landings, which were cast in situ. Programme was accelerated, and structural requirements were satisfied with minimal material usage and wastage. Risks were also reduced, improving health and safety on site.

Maximising efficiency. Minimising resources.

Invisible Connections are the specialists in hidden structural connections for precast and in situ concrete construction. We provide a range of 'unseen' telescopic connection systems for stair landings, beams and columns. We are also the manufacturers of FERBOX® bespoke reinforcement continuity strip.

For precast stair landings, our TSS or RVK stair landing connectors and REDiBOX® permanent recess formers offer clean architectural lines and significantly accelerate speed of construction, when compared to traditional bracketry. For structural reinforcement continuity, FERBOX is made-to-measure, made to be safer and made to reduce wastage.

Speed. Safety. Strength.
